

# BUSPLANNER APPS

---

## Now Available

Breaking news! We have two new **BusPlanner apps** available for both iPhone and Android devices. What are these new apps, and what do they do? Read on to find out!

### BusPlanner Assistant

BusPlanner Assistant gives you on-demand access to your own transportation data – right from your phone. Whether you're a manager, supervisor, or routing technician, you can:

- Access specific runs, routes, vehicles, and students
- Confirm stop locations and times
- Find out who is assigned to each stop

BusPlanner Assistant uses our BusPlanner Info API to retrieve information securely from your BusPlanner database. The app itself is password-protected for optimal data security, but also remembers your credentials to make it easy to access in a pinch.

When you're away from your desk and need information in a hurry, BusPlanner Assistant has it at your fingertips.

### BusPlanner Delays

The BusPlanner Delays app interfaces with the BusPlanner Web Notifications Module. As soon as a notification is posted to your BusPlanner Web site, it appears on the app – giving your stakeholders a more mobile-friendly way to access this information.

Just like the BusPlanner Web Delays & Cancellations page, the app will display:

- Delay & cancellation notices for specific routes or runs
- School closure announcements for weather-related shutdowns
- General notices for all subscribers

Once it's set up, the BusPlanner Delays app can be made available as needed to schools, operators, parents, or just your office. Users can download and access it themselves via the Apple or Android app stores. Ultimately, it helps mobile users view notifications more quickly and easily – leading to greater customer satisfaction for your stakeholders.
